Bengier Ülgen Kılıç

Location: Buffalo, NY, USA Phone: +1 (716) 398 8356 E-mail: bengieru@buffalo.edu

Linkedin: https://linkedin.com/in/ulgenklc Github: https://github.com/ulgenklc Website: https://ulgenklc.github.io

Education _

• Ph.D. in Applied Mathematics

(Expected, April 2023)

(2017)

University at Buffalo, State University of New York (SUNY), New York, USA

• B.S. in Mathematics

Boğaziçi University, İstanbul, Turkey

Software Expertise _

• Expert: Python, SQL, Cython, Matlab, SLURM, IATEX,
Illustrator, Microsoft Office, Jupyter notebooks,
Numpy, scikit learn, PyTorch, Plotly, Pandas,
ReadTheDocs, matplotlib, NetworkX

• Intermediate: AWS, PySpark, HTML, CSS, Git

Skills _

- Statistical analysis: Linear regression, Clustering, Classification, Dynamic community detection, Dimensional reduction, Network analysis, Time-series analysis, Topological data analysis.
- Machine learning: Deep Learning, Image Recognition (CNNs), Natural Language Processing (RNNs).
- **High-performance computing:** Distributed computing.

Work Experience ___

Graduate Research Assistant - University at Buffalo, SUNY

(2019-)

- Pursued high-impact journal publications, gave talks in major conferences and presented papers in journal club meetings.
- Ran multiple research projects, conducted quantitative scientific research, reviewed the literature, analyzed data.
- Built algorithms and models, developed codebases for quantitative research pipelines, prepared documentations.
- Collaborated with interdisciplinary scientists, gained analytical problem solving ability, communication skills and high autonomy.
- Obtained high-level knowledge in network-data analytics, topological & geometrical data analyses, computational neuroscience, data-oriented modeling, state detection, complex graphs, dynamical systems, spreading processes.

Graduate Teaching Assistant - Department of Mathematics, University at Buffalo, SUNY

(2017-)

- Tutored and mentored undergraduate students, graded exams, held office hours.
- Taught undergraduate courses in mathematics key to STEM curriculum.

– Math 141, College Calculus I

Fall'18

– Math 142, College Calculus II

 ${\rm Spring'} 18/{\rm Spring'} 21/{\rm Fall'} 22$

- Math 231, College Calculus III

- Math 309, Linear Algebra

Fall'19/Fall'21/Spring'22

– Math 417, Survey of Multivariable Calculus

Spring'20 Spring'22

Adjunct Instructor – Department of Mathematics, University at Buffalo, SUNY

(2019,2020)

- Administered undergraduate courses in mathematics.
 - Math 131, Mathematical Analysis for Management

Summer'19

– Math 231, College Calculus III

Summer'20

Publications _

- Kilic, B. Ü., Taylor, D. Simplicial cascades are orchestrated by the multidimensional geometry of neuronal complexes. Communications Physics 5, 278 (2022), https://doi.org/10.1038/s42005-022-01062-3.
- Kilic, B. Ü. and S. Muldoon. Skeleton coupling: a novel method for choosing interlayer edges in temporal networks for dynamic community detection, 2022. (In Preparation)

Talks & Poster Presentations	
• Boston University, Dynamical Systems Seminar (BU-DSS)	2022
(Seminar Talk) Thresholding and multi-body interactions orient cascades in spatially embedded networks.	
• Contagion on Complex Social Systems (CCSS)	2022
(Contributed Talk) A simplicial threshold model for higher-order cascades.	
• Network Science Society (Netsci2022)	2022
(C. T.) Simplicial cascades are orchestrated by the multidimensional geometry of neuronal complexes.	
• Northeastern Regional Conference on Complex Systems (NERCCS)	2022
(C. T.) Simplicial cascades are orchestrated by the multidimensional geometry of neuronal complexes.	
• Networks2021, A joint Sunbelt and NetSci conference	2021
(C. T.) Higher-order flow channels of neuronal avalanches uncovered by topological data analysis of simplicial contag	gions.
• Northeastern Regional Conference on Complex Systems (NERCCS)	2021
(C. T.) Characterization of communities in dynamic functional networks.	
(C. T.) Geometrical/topological data analyses reveal higher-order flow structures provide flow channels for neuronal av	
Northeastern Regional Conference on Complex Systems (NERCCS) (C. T.) Piccolin Line and Conference on Complex Systems (NERCCS)	2019
(C. T.) Biomedical image processing via persistent homology.	2022
 Northeastern Regional Conference on Complex Systems (NERCCS) (Poster) Skeleton coupling: novel method for choosing interlayer edges in temporal networks for dynamic community of the complex of the complex systems (NERCCS) 	2022
	2022
 Dynamics Days (DD) (Poster) Cascades over simplicial complexes preferably follow geometrically reinforced channels. 	2022
 Society for Neuroscience (SFN) 	2019
(Poster) Cell detection and segmentation via persistent homology.	2019
